Also included are two DNA sequences from corn plant PV-ZMC732(nK603) of 498 or 1183bp, or primers and probes derived from them (used to detect transgene junction points). The construct is useful for producing a corn plant that tolerates application of glyphosate herbicide by transforming a corn cell with, selecting the corn cell for tolerance to application of glyphosate, and growing the corn cell into a fertile corn plant. The present sequence is a transgene junction probe sequence consisting of corn genomic DNA and vector sequences
                                                                                                                                                       22-JUN-2000;

                                                                  Matches
                                                                                               Query Match
                                                                                                                                                                                The invention relates to a DNA construct (I) comprising a first (F1) and a second (F2) expression cassette. F1 of the DNA construct, in operable linkage, has rice actin 1 (RA1) promoter, RA1 intron, chloroplast transit peptide gene (III), glyphosate tolerant 5-enol-pyruvylshikimate-3-phosphate synthase (EPSPS) gene (III), and transcriptional terminator (IV), and F2 has cauliflower mosaic virus 35S promoter, Hsp70 intron, (III) and (IV). Also included are two DNA sequences from corn plant the V-ZMG732(nk603) of 498 or 1183bp, or primers and probes derived from them (used to detect transgene junction points). The construct is useful for producing a corn plant that tolerates application of glyphosate herbicide by transforming a corn cell with, selecting the corn cell into a fertile corn plant. The present sequence is the 498bp amplicon consisting of corn genomic sequence, vector sequences and Rice ACT1 promoter
                                                                                                                                Sequence 498
                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         application of glyphosate herbicide, comprises two transgene expression
                                                                                                                                                                   sequences

of 24 rpoB gene fragments (AAS05201-AAS05224) from various Mycobacteri species. These rpoB gene fragments can be used in the diagnosis and identification of Mycobacterium species using a novel PCR-restriction fragment length polymorphism analysis (PRA) method. The method comprisobtaining a restriction fragment length polymorphism (RFLP) pattern of The present sequence for Mycobacterium fortuitum rpoB gene fragment is 1 of 24 rpoB gene fragments (AAS05201-AAS05224) from various Mycobacterial

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the 24 rpoB gene fragments; isolating, amplifying and digesting the DNA fragment from the microorganism to be identified and comparing the RFLP patterns from the known rpoB gene fragments with the unidentified fragments. The rpoB gene fragments are useful to identify a wide range of Mycobacterium species, e.g. for diagnosis or to obtain epidemiological and pathogenesis information for selection of appropriate therapies, including M. tuberculosis, M. leprae and non-tuberculous mycobacteria (NTM) encountered in subjects infected with human immunodeficiency virus (HIV). Analysis of the rpoB gene fragments is rapid, precise, simple and cost effective (only 1 pCR required), and can differentiate between many species in a single experiment, including those difficult to distinguish by usual biochemical tests. Also described are oligonucleotide probes (AAS05227-AAS05242) for detecting specific Mycobacterial species
                                                                                                                                                                                                                                                                             Bett AJ, u
                                                                                                                                                                                                                                                                                                                                                                   22-AUG-2002;

The present invention describes a method for propagating a replication-defective adenovirus in an adenoviral E1-complementing cell line expressing E1 gene product(s) which are non-native to the adenovirus, comprising providing all or a portion of an E4 region in cis within the genome of the replication-defective adenovirus. Also described: (1) a replication-defective adenovirus. Also described in of a replication-defective adenovirus adenovirus and or a portion of a heterologous E4 region comprising a heterologous adenoviral ORF6, or the

The invention relates to a novel recombinant adenoviral vector of serotype 24 which is partially deleted in E1 and devoid of E1 activity and comprises a heterologous nucleic acid or an human immunodeficiency virus (HIV)-1 gene. A vector of the invention has anti-HIV activity, an may have a use in gene therapy, and as a vaccine. The recombinant

providing all c the adenovirus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        covertor of serotype 24 which comprises an B4 gene or a segment of an B4 cells comprising ORF6 of an alternative serotype; (3) a population of cells comprising the recombinant adenoviral vector; (4) producing crecombinant, replication-defective adenovirus particles; (5) a purified recombinant, replication-defective adenovirus particles harvested in cercombinant adenovirus particles; (7) a prification comprising purified recombinant adenovirus particles; (7) a composition comprising purified cexpression of heterologous nucleic acid; and (8) generating a cellular-mediated immune response against HIV in an individual. The replication-defective adenovirus in an adenoviral E1-complementing cell line useful for propagating and rescuing multiple serotypes of replication-defective adenovirus in an adenoviral E1-complementing cell line useful for generating a cellular-mediated immune response against HIV in an individual. The resultant virus can be studied and used in cell line and for generating a cellular-mediated immune response against HIV in an individual. The resultant virus can be studied and used in cell various gene therapy and vaccine efforts. The present sequence represents a wild-type adenovirus serotype 24 nucleotide sequence, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁

CC mouse comprising a GPCR gene of the invention; a mouse comprising a GPCR gene of the invention; a mouse comprising a GPCR gene of the invention; a mouse comprising a GPCR gene of the invention; a mouse comprising a comprising a mutation in a different GPCR gene of the invention; and kits comprising CPC probes which hybridise to GPCR polynucleotides of the invention. The CPC gene of the invention; and kits comprising CPC probes which hybridise to GPCR polynucleotides of the invention. The CPC comprising a GPCR nucleic acid. The GPCR nucleic acids and vectors CPC diseases including neurological disorders (e.g., Alzheimer's disease, CPC diseases including neurological disorders (e.g., Alzheimer's disease, CPC (e.g., Crohn's disease, diarrhoea, food poisoning or irritable bowel CPC (e.g., Crohn's disease, diarrhoea, food poisoning or irritable bowel CPC (e.g., Crohn's disease, diarrhoea, food poisoning or irritable bowel CPC (e.g., Crohn's disease, diarrhoea, food poisoning or irritable bowel CPC (e.g., Spout or osteoporosis); metabolic or mutritis, rheumatoid CPC anthritis, gout or osteoporosis); metabolic or nutritive disorders (e.g., autoimmne disorders (e.g., autoimmne disorders (e.g., autoimmne disorders (e.g., cohesity, enzyme deficiency-related diseases or vitamin deficiency-related diseases); and disorders of the kidney, liver, lung, breast, ovary cuterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and thyroid (e.g., cancers). The present sequence acid of the five printed specification; those sequences not shown were obtained in electronic format directly from WIPO at fig. of the wipo.int/pub/published_pct_sequences.
CC thick invention relates to a method of predicting (the progression of) a compound by preparing a gene expression profile of a compound tissue or cell sample exposed to the compound and comparing the compound and comparing the compound in a tissue or cell sample exposed to the compound, where compound in a tissue or cell sample exposed to the compound, where compound in a tissue or cell sample exposed to the compound, where compound in a tissue or cell sample exposed to the compound, where compound in a tissue or cell sample exposed to the compound, where compound in a tissue or cell sample exposed to the compound, where compound in a tissue or cell sample exposed to the compound, where compound in a tissue or cell sample exposed to the compound. The genes are compound of a teast one toxic effect of a compound. The genes are useful as toxicity markers in drug screening and toxicity assays. The compound or test agent will induce various specific kidney pathologies, such as nephritis, compound or test agent will induce various specific kidney pathologies, such as nephritis, compound or test agent will induce to compound or for fect and for compound or determining the similarity compound in the similarity of a toxic response. The methods are useful for determining the similarity conficting or modelling the potential cellular pathways influenced, compound or test agent. The kit is useful for predicting or modelling the toxic response of a test compound, for that show promise as new drug targets and for screening known and newly that show promise as new drug targets and for screening known and newly that show promise as new drug targets and for screening known and newly that show promise as new drug targets and for screening known and newly that show pathologies. This sequence corresponds to a gene marker used in the compound of the invention. (Note: The sequence data for this patent did not format directly from WIPO at fift, wipo.int/pub/published_pct_sequences).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 predicting (the progression of) a toxic effect of a compound, for monitoring the progression of renal disease states, comprises preparing agene expression profile of a kidney tissue or cell sample exposed to the

                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Mendrick

PGE2 is known to be involved in digestive tract conscriptions. The protein encoded gastric juice secretion and neurotransmitter release. The protein encoded by the gene is capable of receiving PGE and of activating GTP-binding protein. MP653 (AAQ46125) is identical to MP660 (AAQ46124) with the exception of a 89-bp deletion in the coding region of the C-terminal tail of the receptor. This deletion creates a new reading frame downstream from this junction. This results in a 30 amino acid C-terminal fragment of the receptor being replaced with a new 26-amino acid fragment in the C-terminal end of the MP653 (AAQ46125) receptor. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1405 BP;

                                                                                                                                    Sequence 51855 BP; 7256
                                                                                                                                                                      The present invention provides the protein and coding sequences of a number of proteins involved in the biosynthesis of melithizaol. These as designated Mel B - Mel H and ORF 1- ORF 7. The sequences can be used in the production of melithizaol, which exhibits fungicidal activity. The present sequence is a coding sequence shown in the exemplification of the
                                                                                                                                                                                                                                                            New nucleic acid molecule termed mel genes encoding polypeptide synthase and non-ribosomal peptide synthetase that are involved in synthesis of melithiazol displaying enhanced fungicidal activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Unidentified

                                                                                                                      ঠ
                                                                                                                                                                                                                                                                                The invention relates to a method of determining susceptibility of an comprising identifying whether the individual has at least one colorophyte development and/or comprising identifying whether the individual has at least one colorophism in a polynucleotide encoding at least one of the protein colorophism in a polynucleotide encoding at least one of the protein colorophyte development and/or joint space constraint and/or osteophyte development and/or joint pain that is consociated with a disease, preferably osteoarthritis. The call line and colorophyte development and/or osteoarthritis. The call line and colorophyte development pain. This sequence corresponds to the polynucleotide encoding a protein listed in the specification. (Note: the polynucleotide encoding a protein listed in the specification. (Note: the polynucleotide encoding a protein listed in the specification but was obtained in electronic format directly from WIPO at figure individual to but was obtained in electronic format directly from WIPO at figure individual to but was obtained in electronic format directly from WIPO at figure individual to jublished pct_sequences).

                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a DNA construct (I) comprising a first (F1) and CC a second (F2) expression cassette. F1 of the DNA construct, in operable CC linkage, has rice actin 1 (RA1) promoter, RA1 intron, chloroplast transit peptide gene (II), glyphosate tolerant 5-enol-pyruvylshikimate-3-CC (IV), and F2 has cauliflower mosaic virus 35S promoter, Hsp70 intron, CC (IV), and F2 has cauliflower mosaic virus 35S promoter, Hsp70 intron, CC (II), (III) and (IV). Also included are two DNA sequences from corn plant PV-ZMGT32(nk603) of 498 or 1183bp, or primers and probes derived from CC them (used to detect transgene junction points). The construct is useful for producing a corn plant that tolerates application of glyphosate CC herbicide by transforming a corn cell with, selecting the corn cell into a CC tolerance to application of glyphosate, and growing the corn cell into a CC tolerance to application of glyphosate, and growing the corn cell into a CC consisting of the Agrobacteium transcriptional terminator sequence, vector sequences and corn sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

CC It comprises of a structural DNA sequence, that encodes an aminomethyl CC phosphonic acid (AMPA) acyltransferase or transacylase (AAT), capable of CC N-acylation of AMPA. This sequence has an amino terminal chloroplast CC transit peptide (CTP), that targets AAT to the chloroplast. Co-expression CC diplyphosate oxidase (GOX) gene, encoding glyphosate oxidoreductase, CC along with AAT provides the transformed plants with higher resistance to CC phosphonate herbicides. This method is useful for enhancing phosphonate CC and to prevent self-fertilisation and enhance hetero-fertilisation. The CC operable promoter and 5' sequences like intron, linked to modified E. CC coli phno coding region, encoding P2A AMPA acyltransferase (AAT) enzyme CC and plant operable termination sequences

                 Containing two amino acid substitutions relative to the corresponding CC wild-type region (AAB29792). The invention also encompasses plant genomic CC EBSPS sequences identified via screening with a rice EBSPS intronic CC sequence; vectors and host plant cells comprising a nucleic acid sequence of the invention; transgenic plants (and tissues and seeds thereof) CC comprising a nucleic acid sequence of the invention, pationally further CC transformed with a DNA encoding an insect, fungal, viral bacterial, CC producing the transgenic plants of the invention. The nucleic acid sequence of tree invention and methods of CC constructs of the invention are used to produce a wide variety of CC constructs of the invention are used to produce a wide variety of CC constructs of the invention are used to produce a wide variety of CC constructs of the invention are used to produce a wide variety of CC constructs of the invention are used to produce a wide variety of CC constructs and canola, glyphosate resistant plants. The glyphosate turf and forage grasses and nut-producing plants. The glants are CC optionally resistant to insects, fungi, viruses, bacteria, nematodes, CC stress, desication and/or other herbicides. The plants are production of a herbicidal target for the high throughput in vitro CC enhancer element which may be used in the rice EBSPS expression cassette of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Rice EPSPS; 5-enolpyruvylshikimate phosphate glyphosate resistance; herbicide resistance; expression construct; enhancer element; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               09-MAR-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to rice 5-enolpyruvylshikimate phosphate synthas (EPSPS) genomic DNA (AAC87188). The invention also relates to an expression cassette comprising, in the 5'-3' direction, one or more transcriptional enhancer elements selected from AAC87190-C87196), the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Rice actin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAC87194 standard; DNA; 1501 BP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        rice EPSPS promoter, genomic DNA encoding a rice EPSPS chloroplast transit peptide, genomic DNA encoding a EPSPS protein modified such that it is resistant to glyphosate (AAC87189), and a transcriptional terminator. The glyphosate resistant EPSPS contains a region (AAB29793)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 19; Page 55-56; 87pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel polynucleotide encoding 5-enolpyruvylshikimate phosphate synthase, used to produce transgenic plants e.g. banana, wheat, maize or rice, having resistance or tolerance to glyphosate herbicide.

synthase
                                                        The present invention relates to an Oryza sp. 5-eno phosphate synthase (EPSPS) gene. Vectors containing to produce plant tissues and fertile whole plants whole results to substantially resistant to syphosate he produce a herbicidal target which is used for high

                 The present invention relates to an invention that results in the expression of the endogenous nucleotide sequence in plant cell being increased. In this method the plant cell comprises a second expression cassette comprising a nucleic acid molecule, where the expression of the nucleic acid molecule of interest in the plant cell is decreased as compared to expression of the nucleic acid molecule of interest in a plant cell lacking the first expression cassette. The methods and compositions of the present invention are useful in molecular biology stransformation, in particular for reproducing and predictably manipulating gene expression in a plant cell. The present sequence is smucleotide sequence of rice actin promoter.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ABK11039
                    The invention relates to a grass plant, which has been genetically modified to substantially inhibit generative propagation and carry herbicide resistance. The grass is useful for growth and/or propagation of grasses. The grass is used to play at least one sport (e.g. baseball, cricket, football, golf, rugby, soccer or tennis), or used at least in a portion of an athletic field, lawn or park. The grass is fed to animal feedstuff. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cauliflower mosaic virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Escherichia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Oryza sativa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Agrobacterium tumefaciens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        making a grass involves transforming the grass with a nucleic acid which interferes with metabolism of gibberellic acid. A grass can be treated by applying a phytohormone to at least partially relieve or reverse a change in plant characteristic resulting from genetic modification. The genetically modified grass is useful for growing and/or propagating grass in athletic fields (for sports such as baseball, cricket, football, golf, rugby, soccer and tennis), lawns, parks and other types of landscaping. The grass is also useful as an animal feedstuff for cattle, goats, horses and sheep, due to its increased vegetative growth, improved digestibility and/or nutritional value as animal feedstuff. This sequence represents plasmid pVDH636 DNA. This plasmid was used as a transformation vector for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              modification may result in a heritable change in one or mor characteristics such as inhibition of flowering (or substan that amounts to inhibition), absence of inflorescence, incr production of tillers, delayed heading and inhibition of the developmental switch from vegetative to generative growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Transgenic plant; immunoglobulin production; recombinant production; glycosylation; fucose; glycan; virucide; immunotherapy; maize; lipas 3'UTR; rice; actin promoter; phosphinothricin acyltransferase; PAT; plasmid; pDAB3014; cyclic; circular; ds.

                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                     Ś
                                                                                                                                                              RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antibody. The invention also relates to constructs plasmids and vectors of producing the immunoglobulins; transformed plant cells, calli, plant cissues and whole plants for producing the immunoglobulins; the immunoglobulins methods for producing the immunoglobulins. The immunoglobulins of the invention may be used to treat HSV infection or tumour angiogenesis. The invention may be used to treat HSV infection or tumour angiogenesis. The invention comproduction, reduced costs, and elimination of pathogenic contaminants such as viruses and prions, with a simplified (i.e., non-plant-specific) glycosylation profile which reduces the risk that the immunoglobulin may not be functional in animals. The present sequence represents the plasmid pDAB3014, which may be used in the invention. The plasmid contains a phosphinothricin acyltransferase (PAT) gene under the control of a rice actin promoter, and a maize lipase 3'UTR.
                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                      Matches 169;

The plant host system is useful in producing a desired glycoprotein or its functional fragment. The glycoprotein or its functional fragment may be used for the production of a pharmaceutical composition. The present sequence represents the nucleotide sequence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New plant host cell system for producing a desired glycoprotein comprises a mammalian N-acetylglucosaminyltransferase (GnTIII) enzyme, a nucleic acid sequence encoding the enzyme, or a vector comprising the nucleic acid sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               misc_feature

                                                                                                                                                                                                                                                                                                Sequence 4032 BP; 1072 A;
                                                                                                                                                                                                                                                                                                                 The present sequence was used in the preparation of an improved Bac amyloliquefaciens barstar, i.e. barnase inhibitor, which can be use restrore fertility to male-sterile lines. The DNA sequence encoding improved barstar, leads to increased barstar production in tapetum due to improved translation, and possibly protein stability

```
The specification describes a synthetic vector containing only those elements essential for its functionality and transgenesis of a cell (especially a plant cell). The vector consists of at most one origin of replication (ori) at most one sequence encoding a selection agent and a trfA locus encoding a protein that increases the level of plasmid replication. The vector particularly contains an RK2 ori, especially oriver from pRK2 of Escherichia coli with a broad host range, an antibiotic resistance gene (especially nptIII conferring resistance to kanamycin in bacteria) and a trfA locus from pRK2 encoding the proteins p285 and p382. The vectors are used to prepare transgenic plants and transformed host cells for production of a heterologous proteins, e.g. insulin, interferon, lipase, blood proteins and anti-inflammatory agents. The present sequence represents a plasmid of the invention

The vector consists of at most one origin of replication (ori), at most one sequence encoding a selection agent and a trfA locus encoding a protein that increases the level of plasmid replication. The vector particularly contains an RK2 ori, especially oriV from pRK2 of Escherichia coli with a broad host range, an antibiotic resistance gene (especially nptIII conferring resistance to kanamycin in bacteria) and a trfA locus from pRK2 encoding the proteins P285 and P382. The vectors are used to prepare transgenic plants and transformed host cells for production of a heterologous proteins, e.g. insulin, interferon, lipase, blood proteins and anti-inflammatory agents. The
